THE ELECTRIC CAR The Ampera-e is making electromobility completely suitable for everyday use and fit for the future, too. This new model can drive over 500 kilometers electric range, measured based on the New European Driving Cycle in km (>500 preliminary value) on a single battery charge. The electric engine has a maximum torque of 360 Nm (preliminary), making the vehicle a real pleasure to drive. The Opel electric car will be brought onto the European market in the spring of 2019.
